- Traveled meet clients, artists, and businesses.
- Built consistent relationships with artists, clients, and businesses.
- Responsible for purchasing several styles of art to meet public demand.
- Showcasing art at scheduled appointments.
- Planning and decoration of art pieces.

## PROJECTS

- **- Pearl Lash Extensions - Front end capstone:** I used AngularJs to build a single page application for a client who's users are beauticians and esthetician, I used Firebase to store user information. The user can search and save products and training courses to their account. As well as look at company information, look at pricing etc. I styled this project using Bootstrap and CSS. And eventually refactored this project to be more "client friendly" by hard coding the project into a Wordpress template theme, By doing this the process for updating the website will be easier for the client. This project is deployed and link will be on Github.
- **- MyCloset App - Back end capstone :** is an application build with Python and Django. As the user you can add items to your closet and organize them via categories, colors, brands, prices, etc. You can also add photos of your items. I styled this application using Bootstrap and CSS.
